

## **Solar Thermal Power Plants set to come**

Since May 2007 Sustainable Heat & Power Europe GmbH is cooperating with the Solar Power Group GmbH (SPG) in the field of solar thermal power generation. The fast growing SPG, a successor of the Solarmundo company, will commission its second high temperature solar thermal collector plant at the Plataforma Solar in Almeria in July. While the cooperation with SPG enables SHP to utilize leading edge solar thermal fresnel collectors for their mini solar thermal power plant (MSTPP) projects, SHP Europe provides access to experienced and knowledgeable personnel for the Solar Power Group. This is especially reflected in the fact that Rüdiger Wolf, the M.D. of SHP Europe GmbH, has also taken on the post of Director Projects and Plant Engineering in the Solar Power Group.
